## 7 PCB Design Guide

When designing the PCB onto which SKU609 will be soldered, the proximity of the SKU609 on-board ceramic monopole antenna to metal and other non-RF transparent materials needs to be considered carefully. Two suggested placement schemes are shown below. In the areas marked “Keep-Out Area” there should be no metal either side, above or below (e.g. do not place battery under antenna). The placement schemes in Figure 7-1 show an application board with no non-RF transparent material in the keep-out area, or an application board with the antenna projecting off of the board so that the keep out area is in free-space. In this second scheme it is still important not to place metal components above or below the antenna in a system implementation.

## 9 Manufacturing Process Recommendations

**Figure 9-1: SKU609 Typical Lead-free Soldering Profile**

**Note:** The final re-flow soldering temperature map chosen at the factory depends on additional external factors, for example, choice of soldering paste, size, thickness and properties of the module's baseboard etc. Exceeding the maximum soldering temperature in the recommended soldering profile may permanently damage the module.

## 10 Packaging Specification

**Figure10-1: SKU609 Packaging**

SKU609 modules are put into tray and 528 units per tray. Each tray is 'dry' and vacuum packaging.

SKU609 series modules are Electrostatic Sensitive Devices and require special precautions while handling.

### ESD precautions

The SKU609 modules contain highly sensitive electronic circuitry and are Electrostatic Sensitive Devices (ESD). Handling the SKU609 modules without proper ESD protection may destroy or damage them permanently.

The SKU603 modules are electrostatic sensitive devices (ESD) and require special ESD precautions typically applied to ESD sensitive components. Proper ESD handling and packaging procedures must be applied

throughout the processing, handling, transportation and operation of any application that incorporates the SKU609 module. Don't touch the module by hand or solder with non-anti-static soldering iron to avoid damage to the module.
