1 General Description

The SKM80F is a high-performance GNSS all-in-one solution module that features super sensitivity, ultra low power and small form factor. The RF signal is applied to the antenna input of module, and a complete serial data message with position, velocity and time information is presented at the serial interface with NMEA protocol or custom protocol.

It is based on the high performance features of the Airoha AG3331 single-chip architecture, Its -165dBm tracking sensitivity extends positioning coverage into place like urban canyons and dense foliage environment where the GNSS was not possible before.

2 Applications

- LBS (Location Based Service)
- PND (Portable Navigation Device)
- Vehicle navigation system
- Aeromodelling

Figure 1: SKM80F Top View

3 Features

- GPS only or BDS only or GPS+BDS or GPS+GLONASS
- Ultra high sensitivity: -165dBm
- Extremely fast TTFF at low signal level
- Built-in 12 multi-tone active interference canceller
- Ultra low power consumption
- Advanced Features: AlwaysLocate; AIC; EPO;EASY
- SBAS (WAAS,EGNOS,MSAS,GAGAN)
- RoHS compliance (Lead-free)
- FCC,CE compliance

4 Pin Assignment

Figure 2: SKM80F Pin Package

5 Pin Description

Pin No.	Pin name	I/O	Description	Remark
---------	----------	-----	-------------	--------

1	RXD	I	UART Serial Data Input	
2	TXD	O	UART Serial Data Output	
3	GND	G	Ground	
4	VCC	P	Module Power Supply	

6 Interfaces Configuration

Power Supply

Regulated power for the SKM80F is required. The input voltage Vcc should be 3.3V to 5V range, current is no less than 100mA. Suitable decoupling must be provided by external decoupling circuitry (10uF and 0.1uF). It can reduce the Noise from power supply and increase power stability.

Main power supply Vcc current varies according to the processor load and satellite acquisition. Maximum Vcc peak current is about 50 mA during acquisition.

UART Port

The module supports one full duplex serial channels UART. The serial connections are at 2.85V LVTTTL logic levels, if need different voltage levels, use appropriate level shifters. the data format is however fixed: X, N, 8, 1, i.e. X baud rate, no parity, eight data bits and one stop bit, no other data formats are supported, LSB is sent first. The UART is as NMEA output and PMTK command input.

7 Advanced Software Features

Standby Mode

User can issue software command to make GNSS module go into standby mode that consumes less than 200uA current. GNSS module will be awaked when receiving any byte. The following flow chart is an example to make GNSS module go into standby mode and then wake up.

Periodic Mode

When GNSS module is commanded to periodic mode, it will be in operation and standby periodically. Its status of power consumption is as below chart.

AlwaysLocate™

AlwaysLocate™ is an intelligent controller of periodic mode. Depending on the environment and motion conditions, GNSS module can adaptively adjust working/standby time to achieve balance of positioning accuracy and power consumption. In this mode, the host CPU does not need to control GNSS module until the host CPU needs the GPS position data. The following flow chart is an example to make GNSS module go into AlwaysLocate™ mode and then back to normal operation mode.

AGPS Support for Fast TTFF (EPO™)

The AGPS (EPO™) supply the predicated Extended Prediction Orbit data to speed TTFF ,users can

download the EPO data to GPS engine from the FTP server by internet or wireless network ,the GPS engine will use the EPO data to assist position calculation when the navigation information of satellites are not enough or weak signal zone .

EASY™

The EASY™ is embedded assist system for quick positioning, the GPS engine will calculate and predict automatically the single emperies (Max. up to 3 days)when power on ,and save the predict information into the memory , GPS engine will use these information for positioning if no enough information from satellites , so the function will be helpful for positioning and TTF improvement under indoor or urban condition ,the Backup power (VBACKUP) is necessary .

Embedded Logger function

The Embedded Logger function don't need host CPU (MCU) and external flash to handle the operation , GPS Engine will use internal flash (embedded in GPS chipset) to log the GPS data (Data format : UTC, Latitude , longitude, Valid ,Checksum), the max log days can up to 2 days under AlwaysLocate™ condition .

AIC_Multi-tone active interference canceller

Because different application (Wi-Fi , GSM/GPRS,3G/4G,Bluetooth)are integrated into navigation system , the harmonic of RF signal will influence the GPS reception , The multi- tone active-interference canceller can reject external RF interference which come from other active components on the main board , to improve the capacity of GPS reception without any needed HW change in the design .SKM80F can cancel up to 12 independent channel interference continuous wave.

GNSS

The SKM80F GNSS modules can receive and track multiple GNSS systems (e.g. GPS, GLONASS and BeiDou signals). The SKM80F can be configure to start searching of which satellite system. By default the

receivers are configured for concurrent GPS and BDS reception.

8 Performance Specification

Parameter	Specification	
Receiver Type	GPS only or GPS+BDS or GPS+GLONASS	
Sensitivity	Tracking	-165dBm Typical
	Acquisition	-148dBm Typical
Accuracy	Position	<2.5m CEP50 (Typical Open Sky)
	Velocity	0.1m/s without SA
Acquisition Time	Cold Start	23s(Typical Open Sky)
	Warm Start	2-3s
	Hot Start	1s
	Re-Acquisition	<1s
Assisted GPS support	EPO	
Power Consumption	Tracking	35mA @5V Typical
	Acquisition	40mA @5V
Navigation Data Update Rate	Max 10Hz	Default 5Hz
Operational Limits	Altitude	Max 18,000m
	Velocity	Max 515m/s
	Acceleration	Less than 4g

9 Electrical Characteristics

Absolute Maximum Rating

Parameter	Symbol	Min	Max	Units
Power Supply				
Power Supply Volt.	VCC	-0.3	5.5	V
Input Pins				

Input voltage on any input connection	VIO	-0.3	3.6	V
RF input power	RF_IN		-40	dBm
Human Body Model ESD capability	RF_IN		2000	V
Machine Model ESD capability	RF_IN		100	V
Environment				
Storage Temperature	Tstg	-40	85	°C
Humidity			95	%

Note: Absolute maximum ratings are stress ratings only, and functional operation at the maxims is not guaranteed. Stress beyond the limits specified in this table may affect device reliability or cause permanent damage to the device. For functional operating conditions, refer to the operating conditions tables as follow. The SKM80F module is Electrostatic Sensitive Device (ESD) and may be damaged with ESD or spike voltage. Although it has built-in ESD protection circuitry at digital I/O, please handle with care to avoid permanent malfunction or performance degradation. Note that RFIN has no ESD protection circuits.

Operating Conditions

Parameter	Symbol	Condition	Min	Typ	Max	Units
Power supply voltage	Vcc		3.3	5	5.5	V
Power supply voltage ripple	Vcc_PP	Vcc=5V			30	mV
Supply current, navigation	Icc	Vcc=5V		35	40	mA
Input high voltage	VIH		2		3.6	V
Input low voltage	VIL		-0.3		0.8	V
Output high voltage	VOH		2.4		3.1	V
Output low voltage	VOL		-0.3		0.4	V

Operating temperature	Topr	-40	85	°C
-----------------------	------	-----	----	----

Figure 3: SKM80F Dimensions

11 Connector Specification

Figure 4: SKM80F Connector

12 Reference design schematic

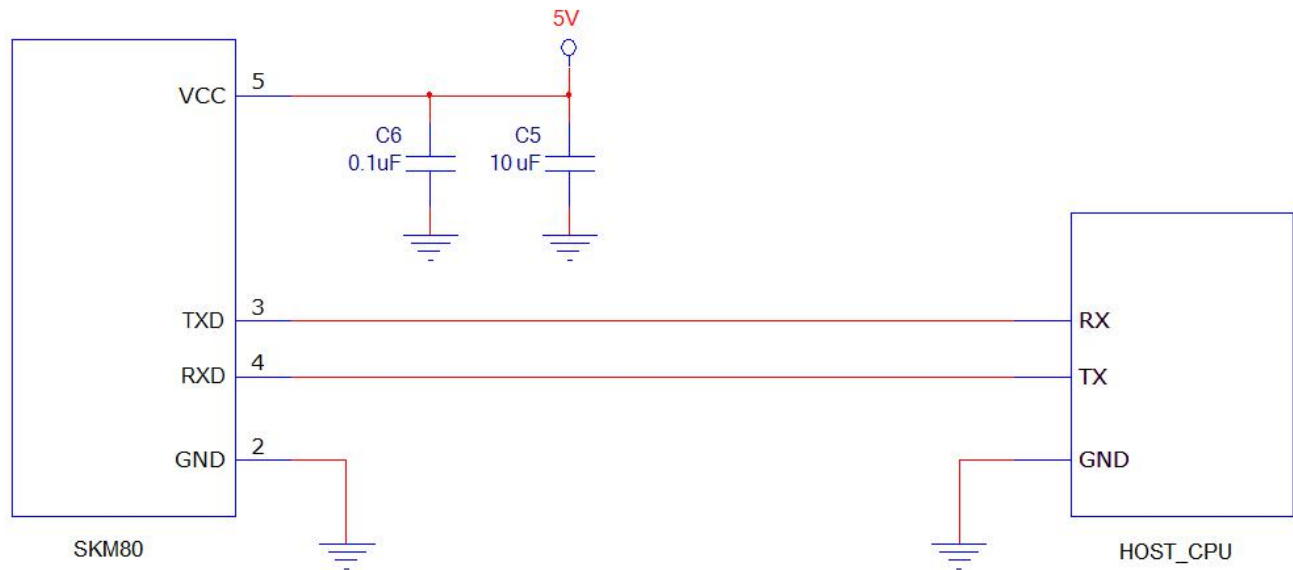

Figure 5: SKM80F Typical Reference design schematic

13 Software Protocol

NMEA 0183 Protocol

The NMEA protocol is an ASCII-based protocol, Records start with a \$ and with carriage return/line feed. GPS specific messages all start with \$GNxxx where xxx is a three-letter identifier of the message data that follows. NMEA messages have a checksum, which allows detection of corrupted data transfers.

The Skylab SKM80F supports the following NMEA-0183 messages: GGA, GLL, GSA, GSV, RMC VTG, ZDA. The module default NMEA-0183 output is set up GGA、GSA、RMC、GSV , and default baud rate is set up 38400bps.

NMEA Record	Description	Default
GNGGA	Global positioning system fixed data	Y
GNGLL	Geographic position—latitude/longitude	N
GPGSA	GNSS DOP and active satellites for GPS	Y
GLGSA	GNSS DOP and active satellites for GLONASS	N
BDGSA	Beidou DOP and active satellites for BD	Y
GPGSV	GNSS satellites in view for GPS	Y
GLGSV	GNSS satellites in view for GLONASS	N
BDGSV	Beidou satellites in view for BD	Y
GNRMC	Recommended minimum specific GNSS data	Y
GNVTG	Course over ground and ground speed	N
GNZDA	Date and Time	N

Table 1: NMEA-0183 Output Messages

GGA-Global Positioning System Fixed Data

This sentence contains the position, time and quality of the navigation fix.

See RMC for Fix Status, Fix Mode, Fix Date, Speed, and True Course.

See GSA for Fix Type, PDOP, and VDOP.

\$GNGGA,021514.000,2232.1799,N,11401.1823,E,1,6,1.25,84.0,M,-2.2,M,,*6A

Name	Example	Units	Description
Message ID	\$GNGGA		GGA protocol header
UTC Position	021514.000		hhmmss.sss
Latitude	2232.1799		ddmm.mmmm
N/S indicator	N		N=north or S=south

Longitude	11401.1823		dddmm.mmmm
E/W Indicator	E		E=east or W=west
Position Fix Indicator	1		See Table 2-1
Satellites Used	6		Range 0 to 12
HDOP	1.25		Horizontal Dilution of Precision
MSL Altitude	84.0	meters	Altitude (referenced to the Ellipsoid)
AltUnit	M	meters	Altitude Unit
GeoSep	-2.2	meters	Geoidal Separation
GeoSepUnit	M	meters	Geoidal Separation Unit
Age of Diff.Corr.	<Null>	second	Null fields when it is not Used
Diff.Ref.Station ID	<Null>		Null fields when it is not Used
Checksum	*6A		
EOL	<CR> <LF>		End of message termination

Table 2: GGA Data Format

Value	Description
0	Fix not available or invalid
1	fix valid
2	Differential GPS, fix valid

Table 2-1: Position Fix Indicators

GLL-Geographic Position – Latitude/Longitude

This sentence contains the fix latitude and longitude.

\$GNGLL,2232.1799,N,11401.1824,E,021513.000,A,A*4E

Name	Example	Units	Description
Message ID	\$GNGLL		GLL protocol header
Latitude	2232.1799		ddmm.mmmm
N/S Indicator	N		N=north or S=south
Longitude	11401.1824		dddmm.mmmm
E/W Indicator	E		E=east or W=west
UTC Position	021513.000		hhmmss.sss
Fix Status	A		A=data valid or V=data not valid
Fix Mode	A		A=autonomous, N = No fix, D=DGPS, E=DR
Checksum	*4E		
EOL	<CR> <LF>		End of message termination

Table 3: GLL Data Format

GSA-GNSS DOP and Active Satellites

This sentence contains the mode of operation, type of fix, PRNs of the satellites used in the solution as well as PDOP, HDOP and VDOP.

GPS GSA message: \$GPGSA,.....

\$GPGSA,A,3,28,20,04,17,10,193,08,,,,,1.14,0.75,0.85*31

GLONASS GSA message: \$GLGSA,.....

BD GSV message: \$BDGSV,.....

\$BDGSV,1,1,03,10,46,329,31,08,43,161,,09,40,217,*52

Name	Example	Units	Description
Message ID	\$GPGSV		GSV protocol header
Number of Message	4		Total number of GSV sentences (Range 1 to 3)
Message Number	1		Sentence number of the total (Range 1 to 3)
Satellites in View	14		Number of satellites in view
Satellite ID	28		Channel 1
Elevation	86	degrees	Channel 1(Range 00 to 90)
Azinmuth	009	degrees	Channel 1(Range 000 to 359)
SNR(C/NO)	35	dB-Hz	Channel 1(Range 00 to 99, null when not tracking)
...			...
Satellite ID	17		Channel 4
Elevation	44	degrees	Channel 4(Range 00 to 90)
Azimuth	338	degrees	Channel 4(Range 000 to 359)
SNR(C/NO)	44	dB-Hz	Channel 4(Range 00 to 99, null when not tracking)
Checksum	*48		
EOL	<CR> <LF>		End of message termination

Table 5: GSV Data Format

Depending on the number of satellites tracked multiple messages of GSV data may be required.

RMC-Recommended Minimum Specific GNSS Data

This sentence contains the recommended minimum fix information.

See GGA for Fix Quality, Sats Used, HDOP, Altitude, Geoidal Separation, and DGPS data.

See GSA for Fix Type, PDOP and VDOP.

\$GNRMC,023345.000,A,2232.1767,N,11401.1953,E,0.18,151.55,100410,,A*76

Name	Example	Units	Description
Message ID	\$GNRMC		RMC protocol header
UTS Position	023345.000		hhmmss.sss
Status	A		A=data valid or V=data not valid
